COMP 206 - Software Systems
Assignment #2

Camilo Garcia La Rotta

February 16, 2017

All files are inside `CamiloGarcia.zip`

1. File name was specified to be only NewProject rather than NewProject.sh

2. First 10 lines of `Data.pg` are the random generated numbers.

   Line 11 is blank as a visual separator.

   Lines 12 to 16 are the last 5 recorded tries.

   Note that all values are "cyphered" with a key of 5. That is, all numbers are n + 5

3. Note that only 1 line changed between `encipher.c` and `decipher.c`. I wasn't sure if it was allowed to submit a header file containing the common functionalities, so I simply submitted the 2 files.
